

Yaojia Han

✉ yjhan@fudan.edu.cn ✉ Yaojia.Han@outlook.com 🌐 <https://jaydenhyj.github.io/>

Fields

Primary: Computational Mechanics, Fatigue Life Prediction, Uncertainty Quantification, Machine Learning for Engineering, Finite Element Analysis

Secondary: Addictive Manufacturing, Composite Materials, Progressive Damage Simulation, Reliability Analysis, Multibody Dynamics

Education

Fudan University, China

Doctor of Engineering, Electronic Information

Sep 2022 – Jun 2026

Dissertation: *Performance Degradation Mechanisms and Multiaxial Fatigue Life Prediction Methods of Civil Aircraft Door Mechanism Systems*

Northwestern Polytechnical University, China

Master of Aeronautical Engineering

Sep 2019 – Mar 2022

Dissertation: *Design and Analysis of Reliability Test of an Electro-pneumatic Valve*

Bachelor of Safety Engineering

Sep 2014 – Jun 2018

Dissertation: *Qualitative Reliability Analysis of an Aircraft Cabin Door Lock System*

Publications

Journal Articles

Research Experience

Performance Degradation and Reliability of Complex Mechanisms

- Developed physics-informed degradation models capturing coupled wear and cyclic plasticity effects.
- Quantified impacts on motion accuracy and functional reliability.
- Established a multi-source uncertainty framework for predictive reliability assessment.

Multiaxial Fatigue Modeling via Two-Scale CDM

- Proposed a two-scale continuum damage mechanics framework linking material and structural scales.
- Introduced deviatoric/volumetric damage decomposition for multiaxial fatigue.
- Enabled interpretable fatigue life prediction under complex loading.

Failure Mechanisms in Additively Manufactured Structures

- Established an experimental–computational framework for defect characterization.
- Quantified defect effects on stress response and fatigue life distribution.
- Provided insights for defect-tolerant structural design.

Optimization of Gradient-Material Structures in Additive Manufacturing

- Developed a material–structure integrated optimization framework.
- Addressed transition-zone design via constitutive modeling and gradient optimization.
- Improved structural performance and reliability through multi-objective design.

Professional Activities

Presentations

- | | |
|-------------|--|
| 2026 | - 11th International Conference on Engineering Failure Analysis. (A data-driven fatigue reliability assessment of motion mechanisms based on surrogate models.) |
| 2021 | <ul style="list-style-type: none">- 2021 5th IEEE International Conference on Sensing, Diagnostics, Prognostics, and Control- 2021 Global Reliability and Prognostics and Health Management (PHM-Nanjing)- 2021 The 11th International Conference on Quality, Reliability, Risk, Maintenance, and Safety Engineering |

Honors and Awards

Outstanding Graduate , Fudan University, China	2026
Best Paper Award , Shanghai Aeronautics Academy, China	2025
Outstanding Doctoral Student Academic Scholarship , Fudan University, China	2023
Best Paper Award , Shanghai Aeronautics Academy, China	2022

Patents

Fei, C.W., **Han, Y.-J.**, “A Method and System for Predicting the Low-Period Fatigue Life of a Turbine Blade Disk,” Chinese Patent CN202211283229.1, 2022. (In Chinese)

Technical Skills

Finite element analysis: ANSYS, Abaqus

Multibody dynamics modeling: Adams, RecurDyn

Numerical computation and data analysis: MATLAB, Python

3D modeling and structural design: CATIA, SolidWorks, Siemens NX (UG)

Languages

Mandarin (native), English (PTE:65)
